(Section-A)**Q.1 Read the following passage carefully and answer the questions that follow:- (9x1=9)**

All of Earth's oceans share one thing in common : plastic pollution. Discarded plastic bags, cups, and bottles make their way into sea. Today, it seems that no part of the ocean is safe from plastic trash. In recent years, oceanographers have searched in vain for a pristine marine environment. They have found plastic everywhere they have looked, "It is a common global problem, we cannot point to a single habitat or location with no plastic. "Plastic harms wildlife and introduces dangerous chemicals into marine ecosystems-communities of organisms interacting with their surroundings. Once plastic enters the environment, it lasts a long time. Scientists are working to prevent plastic pollution from entering sea.

When people litter or when trash is not properly disposed of, things like plastic bags, bottles, straws, foam, beverage cups get carried to the sea by winds and waterways. About 80 percent of ocean plastic originates on land. The rest comes from marine industries such as shipping and fishing. In 2015, Engineer Jenna Jambeck at the University of Georgia and other researchers calculated that at least 8 million tonnes of plastic trash is swept into the ocean from coastsevery year. That's the equivalent of a full garbage truck of plastic being dumped into the sea every minute. If current trends in plastic production and disposal continue, that figure will double by 2025. A report published by the World Economic Forum last year predicts that by 2050, ocean plastic will outweigh all the fish in the sea. In today's world, plastic is everywhere. is found in shoes, clothing, household items, electronics and more. There are different types of plastics, but one thing they all have in common is that they are made of polymers-large molecules made up of repeating units. Their chemical structure give them a lot of advantages: they are cheap and easy to manufacture, lightweight, water-resistant, durable and can be moulded into nearly any shape. One way to keep the ocean cleaner and healthier is through clean up efforts. A lot of plastic waste caught in ocean currents eventually washes up on beaches. Removing it can prevent it from blowing out to sea again. Beach clean-up is ocean clean-up.

- (i) Why is plastic so multipurpose these days. Give its qualities.
- (ii) How can we keep our oceans clean and plastic free?
- (iii) What does the research calculation tell about the plastic trash swept in the oceans?
- (iv) Why are the plastic things that are generally carried to the sea by winds?
- (v) What does the report of world Economic forum predict regarding plastic pollution in ocean.
- (vi) Where does most of the ocean plastic come from?

Find the word from the passage which mean.

- (vii) Things that do not allow water to enter easily.
- (viii) as, area on the edge of the sea.
- (ix) Scientists who study oceans.

Q.2 Read the following passage carefully and answer the questions that follow:- (1x6=6)

Galileo Galilei, often known as Galileo, was an Italian physicist, mathematician, engineer, astronomer, and philosopher who played a major role in the scientific revolution. His achievements include improvements in the telescope and consequent astronomical observations and support for Copernicanism. Galileo has been called the "father of modern observational astronomy", the "father of modern physics", the "father of science" and the "father of modern science". His contributions to observational astronomy include the telescopic confirmation of the phases of Venus, the discovery of the four largest satellites of Jupiter (named the Galilean moons in his honour), and the observation and analysis of sunspots. Galileo also worked on applied science and technology, inventing an improved military compass and other instruments. In the Catholic world prior to Galileo's conflict with the Church, the majority of educated people subscribed to the Aristotelian geocentric view that the Earth was the center of the universe and that all heavenly bodies revolved around the Earth.

Indeed, to the casual observer, it seemed common sense that since the sun 'rose' in the morning and 'set' at night, it must have circled around the earth. Ancient authorities like Aristotle and the Roman astronomer Ptolemy had championed this viewpoint, and the notion was also supported by the Catholic Church, which placed mankind, God's principal creation, at the center of the cosmos. Yet, the Ptolemaic theory was soon under attack. Nicholas Copernicus, a Polish astronomer, openly questioned the Ptolemaic system and proposed a heliocentric system in which the planets including earth orbited the sun (Helios). This more mathematically satisfying way of arranging the solar system did not attract many supporters at first, since the available data did not yet support a wholesale abandonment of Ptolemy's system. By the end of the 16th century, however, astronomers like Johannes Kepler (1571-1630) had also begun to embrace Copernicus's theory.

- (i) Who was Copernicus?
- (ii) When did Johannes Kepler accept Copernicus' theory?
- (iii) Who was Galileo?
- (iv) What is Galileo called?
- (v) Write the word from the passage which means 'Given up'.
- (vi) Write the opposite word of 'Minor' from the passage.

Q.10 **Read the following passage carefully and answer the questions that follow:- (1x6=6)**

You saw Subbu always with The Boss but in the attendance rolls, he was grouped under a department called the Story Department comprising a lawyer and an assembly of writers and poets. The lawyer was also officially known as the legal adviser, but everybody referred to him as the opposite. An extremely talented actress, who was also extremely temperamental, once blew over on the sets. While everyone stood stunned, the lawyer quietly switched on the recording equipment. When the actress paused for breath, the lawyer said to her, "One minute, please," and played back the recording. There was nothing incriminating or unmentionably foul about the actress's tirade against the producer. But when she heard her voice again through the sound equipment, she was struck dumb. A girl from the countryside, she hadn't gone through all the stages of worldly experience that generally precede a position of importance and sophistication that she had found herself catapulted into. She never quite recovered from the terror she felt that day. That was the end of a brief and brilliant acting career — the legal adviser, who was also a member of the Story Department, had unwittingly brought about that sad end.
