## SOLUTIONS

1. Ans. (A)

Sol. For weak acid, $\alpha=\frac{\Lambda_{\mathrm{m}}}{\Lambda_{0}}$
$\mathrm{K}_{\mathrm{a}}=\frac{\mathrm{C} \alpha^{2}}{1-\alpha} \Rightarrow \mathrm{K}_{\mathrm{a}}(1-\alpha)=\mathrm{C} \alpha^{2}$
$\Rightarrow \mathrm{K}_{\mathrm{a}}\left(1-\frac{\Lambda_{\mathrm{m}}}{\Lambda_{0}}\right)=\mathrm{C}\left(\frac{\Lambda_{\mathrm{m}}}{\Lambda_{0}}\right)^{2}$
$\Rightarrow \mathrm{K}_{\mathrm{a}}-\frac{\Lambda_{\mathrm{m}} \mathrm{K}_{\mathrm{a}}}{\Lambda_{0}}=\frac{\mathrm{C} \Lambda_{\mathrm{m}}^{2}}{\left(\Lambda_{0}\right)^{2}}$
Divide by ' $\Lambda_{\mathrm{m}}{ }^{\prime}$
$\Rightarrow \frac{\mathrm{K}_{\mathrm{a}}}{\Lambda_{\mathrm{m}}}=\frac{\mathrm{C} \Lambda_{\mathrm{m}}}{\left(\Lambda_{0}\right)^{2}}+\frac{\mathrm{K}_{\mathrm{a}}}{\Lambda_{0}}$
$\Rightarrow \frac{1}{\Lambda_{\mathrm{m}}}=\frac{\mathrm{C} \Lambda_{\mathrm{m}}}{\mathrm{K}_{\mathrm{a}}\left(\Lambda_{0}\right)^{2}}+\frac{1}{\Lambda_{0}}$
Plot $\frac{1}{\Lambda_{\mathrm{m}}}$ vs C $\Lambda_{\mathrm{m}}$ has
Slope $=\frac{1}{\mathrm{~K}_{\mathrm{a}}\left(\Lambda_{0}\right)^{2}}=\mathrm{S}$
y-intercept $=\frac{1}{\Lambda_{0}}=\mathrm{P}$
Then, $\frac{\mathrm{P}}{\mathrm{S}}=\frac{\frac{1}{\Lambda_{0}}}{\frac{1}{\mathrm{~K}_{\mathrm{a}}\left(\Lambda_{0}\right)^{2}}}=\mathrm{K}_{\mathrm{a}} \Lambda_{0}$

$100 \mathrm{~m}+80 \mathrm{n}=440$
$5 m+4 n=22$

From the extrapolation of curve
$\Lambda^{\circ}\left(Z_{m} X_{n}\right)=340$
$\mathrm{m} \times \lambda_{\mathrm{z}^{\mathrm{n}+}}^{\circ}+\mathrm{n} \lambda_{\mathrm{x}^{\mathrm{m}-}}^{0}=340$
$50 \mathrm{~m}+80 \mathrm{n}=340$
$5 m+8 n=34$
(3) - (2) $\Rightarrow \quad 4 \mathrm{n}=12 \Rightarrow \mathrm{n}=3$

Putting in (2) we get $\mathrm{m}=2$
Putting in (1) we get $p=2$
$m+n+p=2+3+2=7$

16. Ans. (A, B)

Sol. Note : We feel option (C) is incorrect because in some type of concentration cells, salt bridge is not required. Which can be confirmed from NCERT (XII-Chemistry, Part-1) in Sub section 3.2 Galvanic Cell. "The electrolytes of the two half-cells are connected internally through a salt bridge as shown in Fig. 3.1. Sometimes, both the electrodes dip in the same electrolyte solution and in such cases we do not require a salt bridge. "
