## PHYSICAL CHEMISTRY

## MOLE CONCEPT

1. The treatment of an aqueous solution of 3.74 g of $\mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$ with excess KI results in a brown solution along with the formation of a precipitate. Passing $\mathrm{H}_{2} \mathrm{~S}$ through this brown solution gives another precipitate X . The amount of X (ing) is $\qquad$ .
[Given : Atomic mass of $\mathrm{H}=1, \mathrm{~N}=14, \mathrm{O}=16, \mathrm{~S}=32, \mathrm{~K}=39, \mathrm{Cu}=63, \mathrm{I}=127$ ]
[JEE(Advanced) 2022]
2. Dissolving 1.24 g of white phosphorous in boiling NaOH solution in an inert atmosphere gives a gas $\mathbf{Q}$. The amount of $\mathrm{CuSO}_{4}$ (in g) required to completely consume the gas $\mathbf{Q}$ is $\qquad$ .
[Given : Atomic mass of $\mathrm{H}=1, \mathrm{O}=16, \mathrm{Na}=23, \mathrm{P}=31, \mathrm{~S}=32, \mathrm{Cu}=63$ ]
[JEE(Advanced) 2022]
3. To check the principle of multiple proportions, a series of pure binary compounds $\left(P_{m} Q_{n}\right)$ were analyzed and their composition is tabulated below. The correct option(s) is(are)
[JEE(Advanced) 2022]

| Compound | Weight \% of P | Weight \% of Q |
| :---: | :---: | :---: |
| $\mathbf{1}$ | 50 | 50 |
| $\mathbf{2}$ | 44.4 | 55.6 |
| $\mathbf{3}$ | 40 | 60 |

(A) If empirical formula of compound $\mathbf{3}$ is $\mathrm{P}_{3} \mathrm{Q}_{4}$, then the empirical formula of compound 2 is $\mathrm{P}_{3} \mathrm{Q}_{5}$.
(B) If empirical formula of compound $\mathbf{3}$ is $\mathrm{P}_{3} \mathrm{Q}_{2}$ and atomic weight of element P is 20 , then the atomic weight of Q is 45 .
(C) If empirical formula of compound $\mathbf{2}$ is PQ , then the empirical formula of the compound $\mathbf{1}$ is $\mathrm{P}_{5} \mathrm{Q}_{4}$.
(D) If atomic weight of P and Q are 70 and 35 , respectively, then the empirical formula of compound $\mathbf{1}$ is $\mathrm{P}_{2} \mathrm{Q}$.

## Question Stem for Question Nos. 4 and 5

## Question Stem

Reaction of $\mathbf{x} g$ of Sn with HCl quantitatively produced a salt. Entire amount of the salt reacted with $\mathbf{y} g$ of nitrobenzene in the presence of required amount of HCl to produce 1.29 g of an organic salt (quantitatively).
(Use Molar masses (in $\mathrm{g} \mathrm{mol}^{-1}$ ) of $\mathrm{H}, \mathrm{C}, \mathrm{N}, \mathrm{O}, \mathrm{Cl}$ and Sn as $1,12,14,16,35$ and 119 , respectively).
[JEE(Advanced) 2021]
4. The value of $\mathbf{x}$ is $\qquad$ .
5. The value of $\mathbf{y}$ is $\qquad$ .
6. Aluminium reacts with sulfuric acid to form aluminium sulfate and hydrogen. What is the volume of hydrogen gas in liters (L) produced at 300 K and 1.0 atm pressure, when 5.4 g of aluminium and 50.0 mL of 5.0 M sulfuric acid are combined for the reaction?
(Use molar mass of aluminium as $27.0 \mathrm{~g} \mathrm{~mol}^{-1}, \mathrm{R}=0.082 \mathrm{~atm} \mathrm{~L} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}$ )
[JEE(Advanced) 2020]
7. The ammonia prepared by treating ammonium sulphate with calcium hydroxide is completely used by $\mathrm{NiCl}_{2} \cdot 6 \mathrm{H}_{2} \mathrm{O}$ to form a stable coordination compound. Assume that both the reactions are $100 \%$ complete. If 1584 g of ammonium sulphate and 952 g of $\mathrm{NiCl}_{2} \cdot 6 \mathrm{H}_{2} \mathrm{O}$ are used in the preparation, the combined weight (in grams) of gypsum and the nickel-ammonia coordination compound thus produced is $\qquad$ -.
(Atomic weights in $\mathrm{g} \mathrm{mol}^{-1}: \mathrm{H}=1, \mathrm{~N}=14, \mathrm{O}=16, \mathrm{~S}=32, \mathrm{Cl}=35.5, \mathrm{Ca}=40, \mathrm{Ni}=59$ )
[JEE(Advanced) 2018]
8. If the value of Avogadro number is $6.023 \times 10^{23} \mathrm{~mol}^{-1}$ and the value of Boltzmann constant is $1.380 \times 10^{-23} \mathrm{JK}^{-1}$, then the number of significant digits in the calculated value of the universal gas constant is
[JEE(Advanced) 2014]

## SOLUTIONS

1. Ans. (0.31-0.33)

Sol. $2 \mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}+5 \mathrm{KI} \longrightarrow \mathrm{Cu}_{2} \mathrm{I}_{2}+\mathrm{KI}_{3}+4 \mathrm{KNO}_{3}$

$$
0.02
$$

$\mathrm{KI}_{3}+\mathrm{H}_{2} \mathrm{~S} \longrightarrow \mathrm{~S} \downarrow+\mathrm{KI}+2 \mathrm{HI}$
$0.01 \quad 0.01$
$\mathrm{n}_{\mathrm{S}}=0.01$ mole
weight of sulphur $=32 \times 0.01=0.32 \mathrm{gm}$
2. Ans. (2.37-2.41)

Sol. Mole of $\mathrm{P}_{4}=\frac{1.24}{31 \times 4}=0.01$
$\mathrm{P}_{4}+3 \mathrm{NaOH}+3 \mathrm{H}_{2} \mathrm{O} \longrightarrow \mathrm{PH}_{3}+3 \mathrm{NaH}_{2} \mathrm{PO}_{2}$
0.01 mole $\quad 0.01$ mole
$2 \mathrm{PH}_{3}+3 \mathrm{CuSO}_{4} \rightarrow \mathrm{Cu}_{3} \mathrm{P}_{2}+3 \mathrm{H}_{2} \mathrm{SO}_{4}$
$0.01 \quad \frac{3}{2} \times 0.01$
$=\frac{0.03}{2}$ moles
$\mathrm{W}_{\mathrm{CuSO}_{4}}=\frac{0.03}{2} \times 159=2.385 \mathrm{gm}$
Ans. $=2.38$ or 2.39
3. Ans. (B, C)

Sol.

| Compound | Weight \% of $\mathbf{P}$ | Weight \% of Q |
| :---: | :---: | :---: |
| 1 | 50 | 50 |
| 2 | 44.4 | 55.6 |
| 3 | 40 | 60 |

For option (A)
Let atomic mass of P be $\mathrm{M}_{\mathrm{P}}$ and atomic mass of Q be $\mathrm{M}_{\mathrm{Q}}$
Molar ratio of atoms $\mathrm{P}: \mathrm{Q}$ in compound 3 is

$$
\begin{aligned}
& \frac{40}{\mathrm{M}_{\mathrm{P}}}: \frac{60}{\mathrm{M}_{\mathrm{Q}}}=3: 4 \\
& \frac{2 \mathrm{M}_{\mathrm{Q}}}{3 \mathrm{M}_{\mathrm{p}}}=\frac{3}{4} \Rightarrow 9 \mathrm{M}_{\mathrm{P}}=8 \mathrm{M}_{\mathrm{Q}}
\end{aligned}
$$

Molar ratio of atoms P : Q in compound 2 is

$$
\begin{aligned}
& \frac{44.4}{\mathrm{M}_{\mathrm{P}}}: \frac{55.6}{\mathrm{M}_{\mathrm{Q}}} \\
& =44.4 \mathrm{M}_{\mathrm{Q}}: 55.6 \mathrm{M}_{\mathrm{P}} \\
& =44.4 \mathrm{M}_{\mathrm{Q}}: 55.6 \times \frac{8 \mathrm{M}_{\mathrm{Q}}}{9} \\
& =44.4: 55.6 \times \frac{8}{9}=9: 10
\end{aligned}
$$

$\Rightarrow$ Empirical formula of compound 2 is therefore $\mathrm{P}_{9} \mathrm{Q}_{10}$
Option (A) in incorrect

For option (B)
Molar Ratio of atoms $P: Q$ in compound 3 is $\frac{40}{M_{P}}: \frac{60}{M_{Q}}=3: 2$
$\frac{2 \mathrm{M}_{\mathrm{Q}}}{3 \mathrm{M}_{\mathrm{P}}}=\frac{3}{2} \Rightarrow 9 \mathrm{M}_{\mathrm{P}}=4 \mathrm{M}_{\mathrm{Q}}$
If $\mathrm{M}_{\mathrm{P}}=20 \Rightarrow \mathrm{M}_{\mathrm{Q}}=\frac{9 \times 20}{4}=45$
Option (B) is correct
For option (C)
Molar ratio of atoms P : Q in compound 2 is
$\frac{44.4}{\mathrm{M}_{\mathrm{P}}}: \frac{55.6}{\mathrm{M}_{\mathrm{Q}}}=44.4 \mathrm{M}_{\mathrm{Q}}: 55.6 \mathrm{M}_{\mathrm{P}}=1: 1$
$\Rightarrow \frac{\mathrm{M}_{\mathrm{P}}}{\mathrm{M}_{\mathrm{Q}}}=\frac{44.4}{55.6}$
Molar ratio of atoms P : Q in compound 1 is
$\frac{50}{M_{P}}: \frac{50}{M_{Q}}=M_{Q}: M_{P}$
$=55.6: 44.4$
$\simeq 5: 4$
Hence, empirical formula of compound 1 is $\mathrm{P}_{5} \mathrm{Q}_{4}$
Hence, option (C) is correct
For option (D)
Molar ratio of atoms $\mathrm{P}: \mathrm{Q}$ in compound 1 is

$$
\begin{aligned}
\frac{50}{M_{P}}: \frac{50}{M_{Q}} & =M_{Q}: M_{P} \\
& =35: 70=1: 2
\end{aligned}
$$

Hence, empirical formula of compound 1 is $\mathrm{PQ}_{2}$
Hence, option (D) is incorrect
4. Ans. (3.57)

Sol. The value of $\mathbf{x}$ is

$(72+8+35)+14=129 \mathrm{gm}$ (molecular weight of organic salt)

So to get 1.29 gm organic salt.
We have to form 0.01 mole salt.
So 0.01 mole nitrobenzene is required.
0.03 mole Sn is required.

So the amount of nitrobenzene $=0.01 \times 123=1.23 \mathrm{gm}$
the amount of Sn required $=0.01 \times 357=3.57 \mathrm{gm}$
5. Ans. (1.23)

Sol. The value of $\mathbf{y}$ is

$$
\begin{aligned}
& (72+8+35)+14 \\
& =129 \mathrm{gm} \text { (molecular weight of organic salt) }
\end{aligned}
$$

So to get 1.29 gm organic salt.
We have to form 0.01 mole salt.
So 0.01 mole nitrobenzene is required.
0.03 mole Sn is required.

So the amount of nitrobenzene $=0.01 \times 123=1.23 \mathrm{gm}$
the amount of Sn required $=0.01 \times 357=3.57 \mathrm{gm}$
Ans. 3.57 \& 1.23
6. Ans. (6.00-6.20)

Sol. $2 \mathrm{Al}+3 \mathrm{H}_{2} \mathrm{SO}_{4} \longrightarrow \mathrm{Al}_{2}\left(\mathrm{SO}_{4}\right)_{3}+3 \mathrm{H}_{2}$
Moles of Al takes $=\frac{5.4}{27}=0.2$
moles of $\mathrm{H}_{2} \mathrm{SO}_{4}$ taken $=\frac{50 \times 5.0}{1000}=0.25$
As $\frac{0.2}{2}>\frac{0.25}{3}, \mathrm{H}_{2} \mathrm{SO}_{4}$ is limiting reagent
Now, moles of $\mathrm{H}_{2}$ formed $=\frac{3}{3} \times 0.25=0.25$
$\therefore \quad$ Volume of $\mathrm{H}_{2}$ gas formed $=\frac{\mathrm{nRT}}{\mathrm{P}}=\frac{0.25 \times 0.082 \times 300}{1}=6.15 \mathrm{~L}$
7. Ans. (2992)

Sol. $\quad\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{4}+\mathrm{Ca}(\mathrm{OH})_{2} \rightarrow \mathrm{CaSO}_{4} \cdot 2 \mathrm{H}_{2} \mathrm{O}+2 \mathrm{NH}_{3}$

$=12 \mathrm{~mol}$ 12 mol
$\left.\underset{952 \mathrm{~g}=4 \mathrm{~mol}}{\mathrm{NiCl}_{2} \cdot 6 \mathrm{H}_{2} \mathrm{O}}+\underset{24 \mathrm{~mol}}{6 \mathrm{NH}_{3}} \rightarrow \underset{\substack{(\mathrm{M}=232) \\ 4 \mathrm{~mol}}}{\left[\mathrm{Ni}\left(\mathrm{NH}_{3}\right)_{6}\right.}\right] \mathrm{Cl}_{2}+6 \mathrm{H}_{2} \mathrm{O}$
Total mass $=12 \times 172+4 \times 232=2992 \mathrm{~g}$
8. Ans. (4)

Sol. Universal gas constant $\mathrm{R}=\mathrm{kN}_{\mathrm{A}}$
where $\mathrm{k}=$ Boltzman constant and $\mathrm{N}_{\mathrm{A}}=$ Avogadro number

$$
\begin{aligned}
\therefore \mathrm{R} & =1.380 \times 10^{-23} \times 6.023 \times 10^{23} \mathrm{~J} / \mathrm{K} \text {-mole } \\
& =8.31174 \\
& \cong 8.312
\end{aligned}
$$

So significant figures $=4$
